

# PileMedic™ for Encapsulating Underwater Piles

A Patent-Pending Technology Developed by QuakeWrap, Inc.

Guilford House Condominiums  
9800 West Bay Harbor Drive,  
Bay Harbor Isles, FL

Deteriorated Pile

Cut PileMedic™  
sheet to desired size

Mix QuakeBond™ 220UR (Underwater Resin) and apply QuakeBond™ 220UR to the back of PileMedic™ with a thickness of about 30-40 mil

Transport the PileMedic™  
sheet into water

Wrap PileMedic™ around  
deteriorated pile to create a  
double-layer cylindrical jacket

Temporarily support the  
jacket by wrapping a couple  
of ratchet straps around it

Mix grout and fill the annular  
space between the jacket  
and the pile with grout

Wait 24 hours for the  
underwater resin to cure and  
remove the ratchet straps

## Advantages

- One size fits all piles (no delays for customized jackets)
- No weak seams along height
- No metallic parts
- No costly divers
- Grout can be pressurized
- Provides structural confinement
- Available in carbon or glass
